4.2 Quality and importance

El hábitat subterráneo tiene una gran importancia biológica en Baleares al actuar como hábitat refugio para muchas especies de invertebrados troglobios. Algunas de estas especies son endemismos muy localizados y algunas son verdaderas especies relictas del Terciario, que han sobrevivido a los cambios climáticos en este ambiente donde la humedad y la temperatura se mantienen casi constantes. Por otra parte los Quirópteros utilizan muchas de estas cavidades como áreas de reposo e invernada.
