PF: for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.

NP: in case that a habitat type no longer exists in the site enter: x (optional)

Cover: decimal values can be entered

Caves: for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

Group: A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles

S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Área de S de Menorca que incluye los barrancos de Binigaus, Trebaluger y Algendar, formados al reosionarse la plataforma de sedimentos calizos del Mioceno que forma la mitad S de Menorca. En los barrancos se encuentran prácticamente los únicos acantilados del interior de la isla, por lo que tienen una gran importancia para algunas especies de aves y plantas rupícolas.

4.2 Quality and importance

Además de las aves nidificantes, que justifican su declaración como ZEPA, en la zona crecen *Teucrium asiaticum*, *Hypericum balericum*, *Paeonia cambesedessi*, *Cymbalaria aequitriloba*, *Viola stolonifera* y otras especies endémicas y microareales, algunas de las cuales están incluidas en el Anexo II de la Directiva 92/43/CEE.
