Other Site Characteristics

Cavidad de origen kárstico predominantemente horizontal con un recorrido

superior a los 300 m.

4.2 Quality and importance

En esta cavidad se encuentra el anfípodo *Salentinella angelieri*. El hábitat subterráneo tiene una gran importancia biológica en Baleares al actuar como hábitat refugio para muchas especies de invertebrados troglobios. Algunas de estas especies son endemismos muy localizados y algunas son verdaderas especies relictas del Terciario, que han sobrevivido a los cambios climáticos en este ambiente donde la humedad y la temperatura se mantienen casi constantes. Por otra parte los Quirópteros utilizan muchas de estas cavidades como áreas de reposo e invernada.
