PF: for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.

NP: in case that a habitat type no longer exists in the site enter: x (optional)

Cover: decimal values can be entered

Caves: for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

Group: A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles

S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

La zona incluye un tramo costero del N de Menorca y una amplia zona del interior. Es una zona de relieves suaves, excepto en la costa, donde se encuentra el promontorio de Muntanya Mala, próximo a la Cala de Algaiarens, que son los accidentes más sobresalientes. Toda la zona se encuentra en muy buen estado de conservación con pocas carreteras que permitan el acceso a la costa, que se encuentra restringido. Existen importantes extensiones de bosque y la vegetación arbustiva es notable por su buen desarrollo y diversidad de especies. La agricultura y la ganadería tradicionales que se mantienen en la zona han creado un paisaje en mosaico muy fragmentado que alterna gran variedad de hábitats.

4.2 Quality and importance

La nidificación del Águila pescadora, así como otras especies del Anexo I de la Directiva 79/409/CEE justificó su declaración como ZEPA. La singularidad y extensión, así como el excepcional estado de conservación de algunos de los hábitats motivan su declaración también como LIC.
